

Surgery Repairs. Gravity Heals.

The GAP-FLEX® System is the next generation of knee recovery therapy. Designed to utilize gravity and save you time (and money) in lengthy therapy sessions, the GAP-FLEX® System increases range of motion faster during recovery from total knee replacement.

The setup is simple, and the equipment takes up minimal space and is easily stored. All that is required is the GAP-FLEX® T-bar frame with removable foam and the GAP-FLEX® foam extension block.

The ease-of-use, comfort and minimal session time make the GAP-FLEX® a more pleasant experience, which leads to faster recovery and better results.

Get Your Life Back *FASTER*

Total Knee Recovery Made Simple

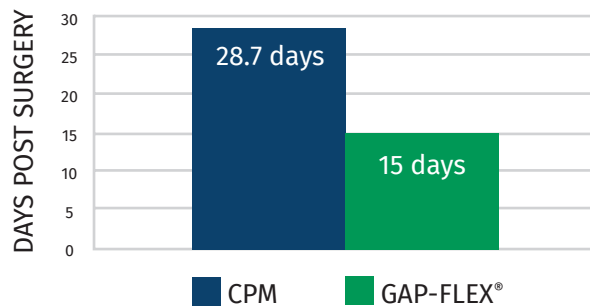

Rapid Recovery. Superior Results.

“With the GAP-FLEX® system, I achieved a degree of flexion in one week that took almost two months without the device. The pain and stiffness is probably only one-third of what I experienced on the first go round.”

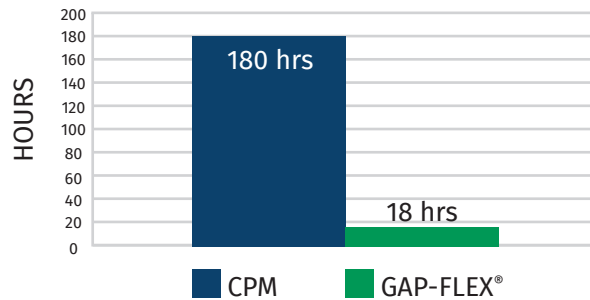

- Female, age 72

Recover Up to 90% Faster with GAP-FLEX®

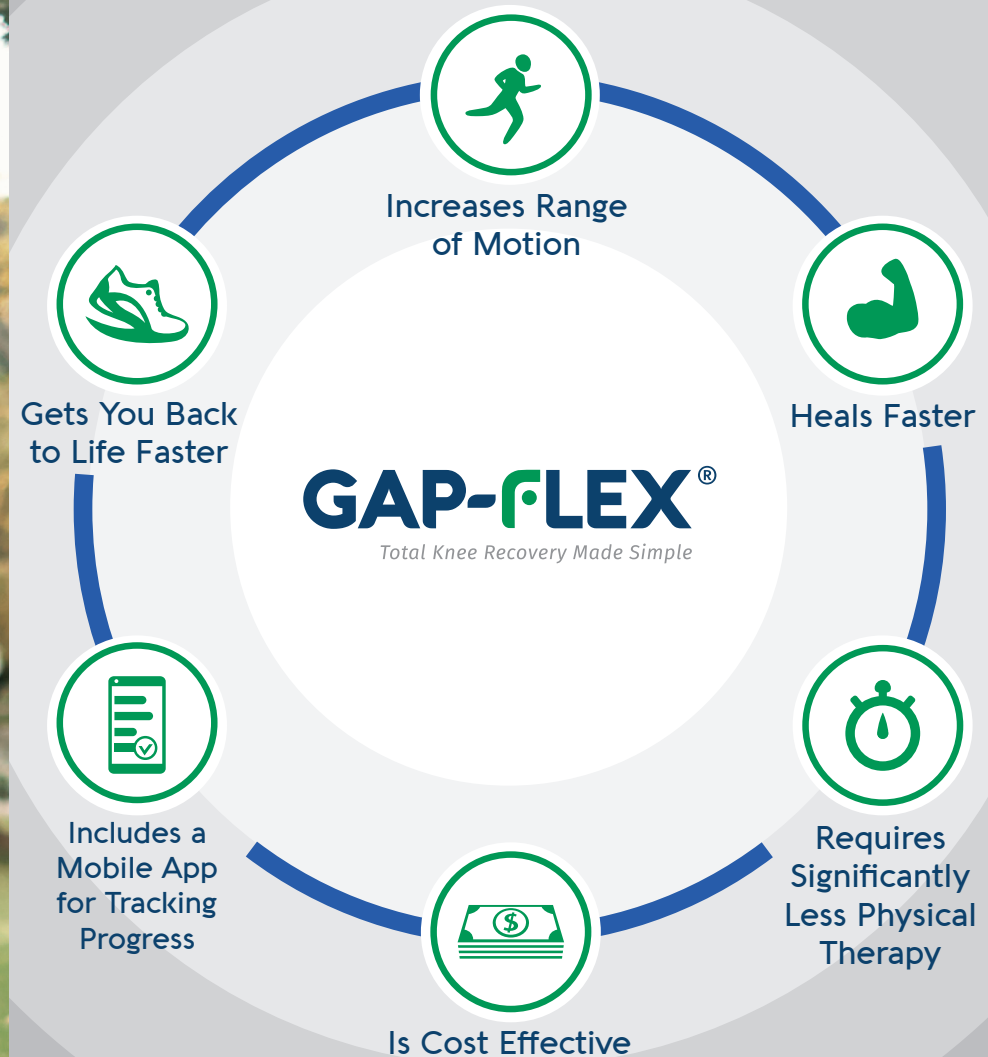

Time to Achieve Recovered Range of Motion

Therapy Time per Device (28 Day Period)

Source: "Gravity Assisted Passive Flexion (GAP-Flex) in TKA Recovery" by Jesse C DeLee, M.D. & Bryan W Kaiser, MD of the University of Texas Health San Antonio

“This is the first time that I have had such a quick recovery from such an extensive surgery. After 21 days of in-home physical therapy, two hours per day, my flexion was only 84 degrees. But after only eight 6 minute treatments with the GAP-FLEX® system my flexion increased by 42 degrees.”

- Male, age 76
